

UPGRADE PLANNED FOR CITY INTERSECTION

Work is due to begin soon on the busy intersection at the top of Long Street, where it meets Kloof Street, Orange Street and Buitensingel. Work will simultaneously take place up Kloof Street as far as Kloof Nek, and on Rheede Street.

These roadworks are necessary to improve the traffic flow in the area, with easier passage for MyCiTi buses and other large vehicles and an upgraded pedestrian environment.

Construction is expected to begin in August and continue until the end of the year. While all efforts will be made to limit the impact on traffic, lanes will be narrowed at times. Some work will take place after hours and at weekends to limit traffic disruption.

It is also important for motorists to note that once construction starts, and in future, there will be no right turn permitted from Kloof Street into Orange Street. Motorists wishing to travel along Orange Street from Kloof Street will have to turn right into Rheede Street, which will also be upgraded. However, one of the improvements will be to create a dedicated lane for turning right into Kloof Street from Buitensingel.

Motorists who can use alternative routes are advised to do so. The City of Cape Town requests that motorists drive carefully through the intersection while construction is underway and thanks them for their patience during this period.

For more information call Craig Bowker on 082 468 2410.

Construction is planned from August and will involve significant traffic disruption.

TRAFFIC FLOW DURING CONSTRUCTION

*Please note that traffic flow may be periodically reduced to a single lane to accommodate roadworks.
